In reviewing my e-mails I noticed that you had not been copied on either the e-mail below or the hard copy of the attached "Dive Survey Report." The document was prepared by Maul Foster & Alongi, Inc. (MFA) on behalf of Siltronic.

The report includes the results of an in-water dive survey completed off-shore of the Siltronic Corporation (Siltronic) facility to assess the potential source of "Area 2" sediment contamination.

In short the dive survey was inconclusive and MFA is not proposing follow-up work for fear of disturbing MGP NAPL observed in sediments during the survey.

As you may recall, in-water sampling work completed by MFA confirmed the presence of Area 2, which is an area of impacted river sediments that appears to be physically separate and distinct from the dissolved phase TCE plume. The TCE plume originates from the vicinity of Siltronic former solvent underground storage tank system and migrates under and into the river.

Sorry about routing this your way so late. I'm still learning who the parties are and their interests. Hopefully the dive survey will be informational and of use to both of you.

Let me know if you have questions.

Dana
